BIXTEENTH ANNUAL REPORT

AND

STATEMENT OF ACCOUNTS

For the Year Ended December 31, 1976

GUYANA ELECTRICITY CORPORATION

1976 ANNUAL REPORT GUYANA ELECTRICITY CORPORATION (Incorporated under the Electricity Ordinance, 1957 No. 34)

OFFICE OF THE CHAIRMAN

45-47, Water Street, Georgetown, 6th September, 1978.

Dear Comrade President,

In accordance with Chapter 56:01 Section 34(1), I have the honour to submit to you the Report on the operations of the Guyana Electricity Corporation for the year ended December 31, 1976, together with the Balance Sheet and Profit and Loss account, as certified by the Auditors appointed in accordance with Chapter 56:01 Section 33(1) of the Laws of Guyana.

Yours cooperatively,

D.I. YanKana

Comrade L.F.S. Burnham, O.E., S.C., President, Guyana State Corporation, Public Buildings, Avenue of the Republic, GEORGETOWN.

GUYANA ELECTRICITY CORPORATION

ANNUAL REPORT 1976

GENERAL REVIEW

Ī

The Annual Report for the year 1976 portrays a picture of a year of progress and problems. Progress in the sense that during the year the Expansion Programme continued, Garden of Eden Generating Station and the Linden Substation were officially opened, the 69KV Line linking Linden and Garden of Eden was commissioned, civil works at Sophia for the 69KV Substation and Communication Tower, Workshop, Stores, System Control building, Frequency Convertor building and the Training School were substantially completed.

At Canefield satisfactory progress was made on the Generation building Workshop and Stores, the 69KV Substation foundations and the fuel oil tank foundations.

Our customers, however, suffered some measure of inconvenience and discomfiture through load shedding which was prevalent, especially in the latter part of the third quarter of the year. This was caused by insufficient firm capacity to meet the increasing load demands during times of repairs to the large Generating Units at Kingston Power Station and the Sets at Rosehall and No. 53 Corentyne.

Regular meetings of the Corporation were held during the year under review. The first such took place on February 6, 1976.

While the restructuring of the Corporation was agreed with Guystac and steps were taken to implement the changes, the Organisation lost in one form or another six senior Engineers.

The General Manager, Secretary and Project Manager attended Management Courses in the United Kingdom.

The Government Subsidy in respect of Fuel Oil was withdrawn on July 31, 1976 and proposals for the revision of the Tariffs were presented to the Government.

I cont'd.

During 1976, the Corporation entered into major contracts totalling \$579,445.00 with the following Contractors:

M. Khan -	- building the Onverwagt	
	Substation and alterations	
	to the existing one	- \$300,398.00
GNEC -	· Installation of Pipe work	
	and Fuel tanks	171,773.00
D.H. Tait	: - Erecting Training School	
	at Sophia	105,274.00

The Corporation also acquired Transport for a property situated at Lot 257-259 Middle Street, Georgetown.

During 1976 the following Officers paid visits overseas:

Cde. P.A. Payne, General Menager, travelled to Trinidad to negotiate fuel supplies for the Corporation.

Cde. M.R. Rogers, Project Manager, visited the United Kingdom and the U.S.A. on behalf of the Guyana National Service and Sweden in connection with the Hydro Power Project.

Cdes. K. Richards and D. Nurse went to Caracas, Venezuela, in connection with the purchase of submarine cables for the river crossing.

Cdes. C. D'Avilar and B. Garraway attended a recruiting Seminar in Trinidad.

Administration

Early in the year Mr. E.J. Bowyer, an Overseas Development Ministry seconded Engineer, resigned from his attachment to the Guyana Electricity Corporation; Mr. R.P.M. Taylor, an ODM seconded Civil Engineer, was assigned to be responsible for the Construction Management functions at the Sophia Convertor Station site, replacing Mr. D. Wood of the Shawinigan Engineering Company Limited.

The Consultants' Contract for Construction Management was terminated on June 3D, 1976 following discussions and negotiations by the Corporation which were aimed at ensuring that the Consultants completed all work under the Scope of Services of their existing Agreement. New proposals were prepared for the continuation of Consultancy Services beyogd June 1976 as seen fit by the Corporation.

A Commissioning Agreement was subsequently signed between the Consultants and the Corporation, with the Corporation assuming full responsibility for all outstanding construction management from July 1, 1976 and the Planning & Construction organisation necessary to carry out these responsibilities was implemented with a view towards the proposed total restructuring of the Corporation.

Cde. D. Brijmohan assumed responsibility as Resident Engineer for Canefield construction site in place of Mr. B. King of Shenguyco.

GEC's forces therefore became much more involved in all aspects of project management and administration - coordination of designs and commissioning policy with the Consultants, cost control, scheduling and project reporting, procurement, construction management and contracting, inspection and commissioning - and provided much technical expertise found lacking in local contractors. The Corporation also provided consultancy and contracting services for the Guyana Bauxite Company, Guyana National Service, Ministry of Agriculture, Small Industries Corporation and the New Amsterdam Municipality.

II cont'd.

Towards the end of the year the Consultants' engineering staff was reduced to two Engineers with office staff provided by the Corporation. The Projects Division staff at that time comprised:

- 25 Engineers
- 12 Superintendents & Supervisors
- 173 Technicians
- 136 Labourers
- 36 Administration & Clerical Staff.

It is to be noted that Messrs. R. Moscote and Aguilar of the IBRD arrived in Guyana for discussions with the GEC's Management and took the opportunity to visit most of the construction sites. Mr. D. Buss, the representative for ODM, also visited Guyana and made similar inspection tours.

Design and Procurement

The designs for the major sections of the system have been completed. Only minor items remain to be resolved as dictated by construction and commissioning requirements and modifications to existing installations owned by GEC and others.

Most of the procured items have arrived in the country.

The major procurement items outstanding at the end of 1976 were the 60 Hz small diesel alternators, the associated switchgear and components for the modifications and connection into the GEC network of stations (Onverwagt, Versailles, Kingston, Everton and New Amsterdam) and for the conversion to 60 hZ of the Anna Regina Power Station. Some procurement was also necessary for the completion of the new power station at Wakenaam Island.

Linden

The official opening of the Linden Substation, the commissioning of the Linden/Garden of Eden Transmission Line and the Garden of Eden Generating Station took place on May 23, 1976. These functions were carried out by the Vice President of Guystac, Hon. Minister George King. This Substation connects the Guybau power system to

the GEC's power system and has functioned quite well; normal maintenance has been carried since commissioning.

Additional switchgear was installed and commissioned for an electrical supply to the Guybau Mines at East Montgomery to facilitate the operation of the new Guybau Dragline.

All major items of equipment for this Substation have been installed but some outstanding items which arrived late, e.g., power interchange metering, additional pilot cables and PLC and supervisory equipment, will be installed early in 1977.

Garden of Eden

During the year the heavy fuel oil, cooling water and fire protection installations were completed and successfully commissioned. The site finishing and final grading work was completed by the Civil Engineering Section of this Division.

Diesel Engines Nos. 2, 3 and 5 were commissioned and ran on light fuel oil while Engine No. 4 was completely erected but failed to meet commissioning acceptance. This engine has now been placed on emergency standby.

During the commissioning of the four engines it was observed that the level of exciter vibration was outside of the accpetable limits and the engines had to be run for some time at a reduced output rating. Modifications carried out by the Manufacturer's representatives allowed the running of the engines at full rated output but failed to provide a consistent and acceptable solution. This matter received the attention of the Consultants' Engineers who achieved consistent results and an acceptable level of performance on Engines Nos. 2, 3 and 4.

All engines will be recommissioned and run on heavy fuel oil early in the new year. A number of outstanding technical matters remained to be resolved between the Manufacturers and the Corporation.

The 69 kV substation was commissioned and energised. All aspects of electrical control and protection had functioned in keeping with the design, and routine maintenance was carried out in accordance with recommendations.

Sophia

The civil works contracts at this site were substantially completed by the end of 1976. These included the construction of foundations for the 69 kV substation and communication tower and the erection of the Workshop and Stores building, the System Control building, the Frequency Convertor building and the Training School building. Only minor building finishes, extra work orders, site finishes and roadways remained to be carried out.

The 69 kV substation, 13.8 kV switchgear and Medium Voltage switchgear installations were substantially completed and commissioning cirecks had commenced.

. Erection of the 3 x 10 Megawatts rotary frequency convertors progressed quite rapidly and on schedule to the point where only about 10% of the main erection work remained outstanding at the end of the year. Commissioning checks were also started on the auxiliary equipment associated with the main machines.

The System Control Section was removed from Kingston Power Station and now occupies offices completed in the new Systems Control Centre building.

The main section of the Systems Control Mimic Panel was damaged in Canada during shipment and was returned to the Manufacturer for repair. This had caused considerable delay to this part of the work and the latest schedule indicates that the equipment will arrive during March 1977.

<u>Canefield</u>

The major civil works contracts were substantially completed with minor items remaining to be tidied up. These major works included the Generating Station building, Workshop & Stores building, 69 kV substation foundations, fuel oil tanks foundations and bond tower crossings foundations, anchor blocks and access roads, the main stalling, the cooling water pump house structure.

The mechanical erection of the two 6 megawatt diesel engines and auxiliaries commenced and erection work was about 60% completed at the end of the year. During the contract period several progress delays were recorded primarily due to the late commissioning of the overhead power house crane, the late arrival of certain main engine parts from the Manufacturers' works and the supply of damaged or wrong parts from the Manufacturers.

The unreliability of the construction power supply for this site was overcome by the early commissioning, in October, of the small black start generating unit for this station.

The cooling water and fire protection pipework contracts were awarded to the Guyana National Engineering Corporation late in the year. Two main contracts, i.e., the fuel pipework contract and the surfacing of the site access roadway, were awaiting approval for award.

The electrical construction for the 69 kV substation and the power station (electrical) have proceeded quite well.

<u>Onverwaq</u>t

The civil contract for the construction of communication and 69 kV substation foundations and roadway was awarded and progressed to the point where all of the foundations have been poured. Progress on site, with regard to back-filling, fencing, roadway, etc., has been generally good.

No. 53 Village

All civil works have been completed. The substation installation work was about 60% completed.

Wakenaam

Erection of the engines and auxiliaries was carreid out as far as available materials facilitated. The distribution network has been installed.

Bermine & New Amsterdam

The erection of the Bermine substation was completed and commissioned

II cont'd

ahead of schedule to facilitate its interim power link-up arrangement between Permine and the Municipatity of New Amserdam. Some work was consequently carried out at New Amsterdam substation including the erection of foundations and installation of the transformers. The Corporation was requested to perform consultancy and contracting services for this linkup of the Municipality. The interconnection was completed and was operating satisfactorily.

Transmission Lines

The Linden to Garden of Eden 69 Kv transmission line construction comprised of 600 structures and 54 miles in length, was completed at the end of January 1967 and commissioned on Febryary 15, 1976. A number of "trip outs" were experienced during the early energisation of the line and these were attributed primarily to adjacent obstacles being blown against the line; this necessitated extensive widening of the falling clearances in certain areas along the line route, and the application of special chemicals to destroy clusters of fast growing bamboo trees in a few locations. However, this line has functioned quite well since and has remained substantially stable.

Construction work on the Garden of Eden to Sophia 69 kV transmission line commenced in February 1976. Persistent rainfall during the early months of construction made most of the access routes impassable but this problem was overcome by the construction of a number of heavy duty bridges to improve access and the use of punts rented from Diamond Sugar Estates for transporting construction materials into the areas. The line route required extensive clearing and towards the end of the year construction was approximately 80% completed.

Surveying and wayleaves for the other lines continued during the year but the local supply of wallaba poles did not improve in spite of special efforts, and this will have very serious effects on the commencement of construction of the new lines.

Interties (13.8 & 11 kV)

The following projects were also carried out during the year:

II cont'd.

Timehri to Garden of Eden, E.B.D	May	2
Garden of Eden to New Hope, E.B.D	May	9
Canal No. 2, W.B.D.	May	16
Guysuco's Drainage Station, Craig, E.B.D.	June	19
Guywa's Grove Station, E.B.D.	June	19
Guyana Timbers Ltd., Houston, E.B.D.	June	27
Guywa's Covent Garden Station	July	3
Industrial Site	July	4
Guywa's Eccles Station	July	10
Mocha/Arcadia & New Providence, E.B.D.	August	22
Republic Park, E.B.D.	October	17
Guyhoc Gardens, Roxanne Burnham Gardens, South Ruimveldt Gardens, South Ruimveldt Park, Festival City, North		
Ruimveldt,	November	14
Esso Bulk Station, E.B.D.	November	21
Tucville and Meadowbrook Gardens (Greater Georgetown)	December	2

These exercises transferred a load of approximately 7.36 MVA from the Kingston/Versailles System to the Garden of Eden Station.

<u>Training</u>

The Project Manager attended a 3-month Management Training Course in the United Kingdom and D. Paraboo Protection & Instrumentation Engineer - was granted study leave in September to pursue a course leading to the M.Sc Degree in Electrical Power Systems Engineering at a U.K. University.

The University of Guyana students absorbed in the Corporation and given on-the-job training are now ready to take on responsible positions.

- (a) One circuit of the proposed 3-circuit line between Garden of Eden and Craig was completed in April;
- (b) The line from Craig to Peter's Hall was completed in March.
- (d) The line from Sophia to Mon Repos, E.C.D. was approximately 95% completed.
- (e) Construction of three circuit intertie lines between Sophia and Kingston has commenced.
- (f) The 13.8 kV distribution lines from Soesdyke, E.B.D. were extended along the Linden/Soesdyke Highway to supply electricity to the Kuru Kururu Settlement.
- (g) The intertie line from Everton to New Amsterdam was completed in November and energised as part of the interim power interconnection between Bermine and New Amsterdam.

The Construction of some of the above circuits facilitated the frequency standardisation exercises in related areas and the provision of 60 Hz power supplies to the Shrimp Processing Plant at McDoom, E.B.D. and the Bel-lu Clay Brick Factory, W.B.D.

Frequency Conversion

Minor procurement and engineering continued throughout the year during which the following areas/installations were successfully converted from 50 Hz to 60Hz:

<u>General Remarks</u>

In spite of many adverse conditions, the Projects Division attained a high level of performance during the year and a substantial volume of work was achieved. This, coupled with the responsibility for the entire Project Management and the successful execution of many contracts by direct labour, was only possible through the dedication, cooperation and keen interest of all employees.

The Consultants

On June 30, 1976, Shawinigan Engineering International Company's Agreement with the Guyana Electricity Corporation was concluded and replaced by a new Agreement with the Consultants' Parent Company, Shawinigan Engineering Company Limited of Montreal, Canada.

From July 1, 1976, the Corporation assumed the responsibilities for the outstanding Project and Construction Management aspects of the Power Systems Extension programme - Stage 1, and the Consultants were retained by the Corporation to manage and coordinate the activities of the Commissioning and Testing of the equipment installed under the Extension Programme.

During 1976, the construction activities continued at all sites, but civil works and external construction activities were retarded as a result of the exceptionally heavy rainfall experienced in the first half of the year. Despite this interference, progress at both the Sophia and Canefield sites continued and by year end, the majority of the civil works and heavy constructional activities were completed.

The Shawinigan staff in Guyana was reduced in 1976 from five to two engineers, with the Consultants' General Manager, Mr. D.S. Fisher returning to Canada in August on completion of this assignment and the Resident Engineer for the Canefield site completing his assignment on June 30th. The Shawinigan staff in Guyana at year end comprised the Commissioning Manager and a Mechanical/Electrical Engineer who have specific responsibilities in the area of testing and commissioning.

GENERATION

Review of Operations

1976 would be remembered largely by many for the inconvenience caused to the Corporation's customers through load shedding. This was due mainly to insufficient firm Capacity to meet the increasing load demand during times of repairs to the large Generating Units at Kingston towards the end of the third quarter and beginning of the last quarter of the year. While No. 53 experienced problems, Bartica, Onverwagt and Anna Regina offered reliable service.

With the commissioning of Garden of Eden Power Station, Substation and Linden Substation, the Department's responsibility increased. Garden of Eden provided backup service for Guybau and after Frequency Conversion of certain areas, their loads were transferred from the 50 Hz Georgetown System to Garden of Eden.

Gross energy production from all generating stations was 226,973,584 KWH, an increase of 8.8% on 1975 but short of projection for 1976. This was due to the late commissioning of the new generating stations. The maximum demand on the entire system showed an increase of 0.27%. There was also an 11 MW demand at Garden of Eden for a period of about five days, when load was exported to Guybau. The Georgetown System was responsible for 90% of the total energy generated throughout the entire System.

During 1976 it was not possible to implement a thorough annual maintenance to any of the three Units at Kingston 'B' Station. This was due to the System's growing load demand and the lateness in procurement of certain equipment after commissioning of the 60 Hz Sets at Garden of Eden, to guarantee reliability.

The No. 3 'B' Boiler suffered badly towards the end of the third quarter and twice outages were caused because of blown tubes. Nos 1 'B' and 2 'B' Units performed relatively better.

III cont'd.

The main problems facing the Department were:

- (i) The silting up of the Demerara River in the region of the C.W. Pump Houses;
- (ii) The leakages of the 'B' Station H.P. Bus-main and the damage to the C.W. Butterfly Valve both necessitating a compulsory shutdown of the Station before repairs could be effected;
- (iii) The implementation of majcr maintenance to Kingston 'B' Station's Boilers and Turbines.

Versailles

This Station generated about 7.79% of the entire System's energy. It suffered badly during the year from lack of replacement maintenance parts, especially Injector nozzles and Turbo-charger parts, delivery of which had been delayed. These were however received later in the year and all four Units were available.

Ruimveldt

The No. 2 G.M. Unit performed very well, producing 0.37% of the total energy. This was by operation policy rather than unavailability. The No. 2 Unit was given a major overhaul during the latter part of the year and except for slight overheating, was performing well. The No. 1 Unit encountered technical problems in fitting the replacement crankshaft.

No. 53 Corentyne

This Station generated 0.31% of the total System's energy. The G.M. Unit was awaiting a replacement crankshaft.. Technical difficulties were encountered when fitting the crankshaft to its block, hence it was not until November that it became available. During that time the Caterpiller suffered from a damaged rotor and defective control rectifier, thus generation became critical.

<u>Rosehall</u>

This one Unit generating Station performed very reliably during the year. Maintenance was regular and programmed at approximately six weeks' intervals, during which period outages were necessary. Generated energy was 0.74% of the System's total. <u>Onverwagt</u>

This Station performed reliably and was responsible for 4.32% of the energy generated by the entire System.

Inlet and exhaust values and injector nozzles perished in a similar way to those at Versailles in that the values wore excessively and the injector nozzles suffered from cold corrosion. Effective measures taken were value angle face changes ~ 30 degrees instead pf 45 degrees -

and swinging the Injector Nozzles 120 at timed intervals. The peak load reached a new height of 2.5 MW, so with a firm capacity of 3 MW the System held good.

Garden of Eden

As part of the proposed 60 Hz Grid System, this Station was the first to be commissioned and was linked with Guybau by a 69 kV transmiss-ion line. It generated 6.64% of the entire System's energy. All four Units had been provisionally commissioned on light fuel oil. First power was achieved through the commissioning of the No. 3 Unit on February 24 and the Nos. 2, 4 and 5 followed on February 25, December 5 and December 22 respectively. The Station's reliability improved after the permanent raw water pumps had been commissioned, thereafter additional 50 Hz 1cad was converted and transferred to Guybau/Garden of Eden Network to relieve the heavily laden 50 Hz Georgetown System.

Initial testing problems included excessive exciter vibration occurring on all the Sets.

Further commissioning to be completed included the Heavy Fuel Dil System, the 69KV transmission to Sophia and the 13.8KV interties

to Versailles. The Station was officially opened on May 23 by the Honourable Minister of Trade & Consumer Protection, Cde. George King.

<u>Anna Regina</u>

This Station ran almost trouble-free except for a broken Alternator Cooling Fan Blade which damaged the insulation and fractured a 'B' phase coil. The coil was insulated and the Unit again functioning normally. The Station's contribution to the total energy generated was 2.45%.

<u>Bartica</u>

Though this Station contributed only 0.49 per cent of the System's total energy, it nevertheless, with 40.46% rise in peak load, showed the largest maximum demand increase through natural growth in the entire System. The actual value being 0.302 MW which approached the capacity of one of the two Units. With no immediate plans for interconnection of the Station, additional generating capacities must soon be provided to retain a firm capacity. Again, in this Station as in other outlying stations, the bad load factor attributed to a high cost/unit generated.

Wakenaam

This Station remained incomplete in that a number of electrical parts which had been borrowed for temporarily supplementing defective parts for existing stations, had not been readily replaced.

One of the two engines had been for sometime completed while the other awaited replacement parts.

There still existed outstanding civil work with respect to the fuel system and also landscaping to be done.

<u>Sophia</u>

The Frequency Convertor Station, System Control and Training School were showing very good signs of nearing completion. Already discussions had been held and plans were afoot to release staff as necessary for training in various categories.

TRANSMISSION AND DISTRIBUTION

Extensions

Despite the present upward trend affecting the cost of transmission and distribution line materials and accessories, significant extensions of the primary and secondary distribution systems were made to many newly developed areas and communities thus providing electricity for potential customers of various tariff groups.

A total of 3,536 additional customers were attracted to the system throughout the year. East Coast Demerara contributed 35.54% of the total number of new connections made on the entire system.

To meet the demand for electrification throughout the franchise areas, the Corporation's transformer capacity was increased to 110,126.75 KVA or plus 9.44%, also 47 miles of primary lines and 41.8 miles of secondary lines were erected.

Areas

Corentyne

The major section of the system's expansion was achieved in this region. Work was in progress to link the Rosehall and No. 53 Stations by closing the gap between Joppa and Whim. Up to the end of December approximately 9 miles of tulip conductors between Nurney and Joppa had been tensioned and tied off.

West Berbice and East Coast

Primary extensions in this area totalled three miles while secondary extensions totalled 4.75 miles. The Guyana Rice Board's mill at Belmonte, Mahaicony, and Frederick's Rice Mill at Dundee were supplied with 60 Hz power.

East Coast Demerara

The Bitumen Plant at North Clonbrook was supplied with power and so were the Guywa Drainage Pumps at Victoria and Golden Grove.

<u>West Demerara</u>

A 13.8 KV line from Vriesland to Canal No. 2 was constructed. This covered a distance of six miles. The other major activity was the road diversion from Hague to Lernora and from Plantain Walk to Pouderoyen where in most cases new poles were planted and lines had to be changed over to facilitate the road diversions.

Essequibo Coast

The south feeder from Anna Regina Power Station was extended from Middlesex to Aurora enabling another 109 new services to be established. Surveys have been completed for the Aurora to Supenaam section where it was expected that another 225 new customers would be connected. Approximately 80% of 4 KV lines were converted to 11 KV and Queenstown and Suddie Housing Schemes were provided with power. In addition, power was supplied to Guyana Rice Board Silos at Somerset and Berks and rice mill at Anna Regina. Guywa's pump and the Cassava Factory at Charity were also supplied with power.

Wakenaam

Approximately 95% of the transmission and distribution network had been completed. The line to supply Guyana Rice Board's silo and rice mill had been erected and provision has been made for installation of a 500 KVA transformer.

Bartica

The 4 KV primary line has been extended another 0.9 miles to Carabesce Hill to supply Guywa's pump and to supply power to residents to Carabesce Hill. The 33 KV transmission line between Tumatumari and Konawaruk was repaired. A low voltage distribution network was established for Guyana National Service at Konawaruk.

IV contd.

Greater Georgetown and Suburbs

Most of the work done in this area was routine maintenance. A high voltage spur was erected to feed residents in Guyhoc Gardens.

Maintenance

Several rotten poles, crossarms and defective insulators were changed in all regions of the system within the franchise area. Faulty transformers were replaced and over-sagging line retensioned.

Tree trimming and cutting in all areas prevented hazardous growth. This, with the rigid and effective line maintenance carried out, including Hot Line work, minimised outages, thus improving the reliability of all feeders of the distribution network as a whole.

Sectional disruptions of the system due to fires, lightning, strikes, accidents by vehicles,faulty connections, etc.,were all attended on emergency bases, restoring supply with the least possible down time.

Street Lighting

The demand for Mercury Vapour lamps continues to increase and at December 31, 1976, the total number of M.V. lamps in the various areas can be seen from the following statistics:

IV cont'd.

<u>STATISTICS</u>

<u>Maintenance</u>

No. of Trees Trimmed during 1976	5,186
No. of Trees Cut during 1976	541
No. of Bad Poles changed during 1976	371

PERSONNEL & PUBLIC RELATIONS

Personnel

A Personnel Manager was appointed in October 1976 to head the Personnel Department.

<u>Training</u>

With the assistance of the Canadian International Development Agency, a Training School at Sophia was in the course of construction and is expected to be completed early in 1977. A Chief Training Officer had been appointed as well as two Instructors (one Electrical and one Mechanical), who were engaged in the preparation of Ccurse Programme.

Seminars

Two Seminars were held to discuss with Senior personnel the administrative restructuring of the Organisation which would be put into operation early in 1977.

Two Seminars on matters of Road Safety were arranged for Corporation's staff by the National Road Safety Cuuncil.

Four employees were granted study leave with pay to pursue studies at the University of Guyana in Political Science, Modern Languages and the GTD/HTD in Electrical Engineering.

Cde. D. Paraboo, Electrical Engineer, was granted one year's leave to pursue studies at the Imperial College of Science and Technology in the U.K. leading to the Master of Science Degree in Electrical Engineering.

The General Manager ~ Cde. P.A. Payne, the Project Manager Cde. M.R. Rogers and the Secretary ~ Cde. J.L. Agard, attended a General Management Course at the Urwick Management Centre in the United Kingdom. The Training by Urwick International, Management Consultants

formed part of the management development capability for the continuous development of supervisory staff at all levels.

Industrial Relations

New Collective Agreements were signed during the year for Senior Staff, General Monthly, and Hourly and Daily-paid employees. The three Agreements will expire on December 31, 1977.

First Aid Section

During the year, 1,696 cases were treated by the Industrial Nurses, also 135 employees were referred to hospital. There were two deaths as a result of Industrial accidents.

First Aid lectures were given to employees including those stationed at outposts and rural power stations.

Visits were paid to hospitalised employees as well as to pensioners.

Absenteeism

A total of $120,064\frac{1}{2}$ man-hours was lost through sickness and unauthorised absence.

Discussions towards the establishment of a medical scheme were in progress.

Electra Credit Union

Membership of the Electra Credit Union stood at 343. During the year loans amounted to \$141,911.55 and savings to \$146,255.02.

<u>Staff</u>

At December 31, 1976 there were 1,065 Hourly and Daily-paid employees, 129 on the Private Payroll and 298 on the General Monthly Payroll.

Public Relations

General advertising was carried out in the news media. Wide publicity was given to the Corporation's Development Programme and its contribution to National Development.

The Public Relations Officer, apart from appearing on "Action Line" and Radio Demerara explaining the Corporation's position with regard to the constant blackouts and billing problems, also served on the National Mashramani Committee and the Mashramani Committee of the Public Utilities & Service Group of Guyana State Corporation.

The Section assisted in the arrangements for the ceremonies which marked GEC's contribution to the Tenth Anniversary Celebrations the opening of the Linden Sub-Station and the Garden of Eden Generating Station. The Corporation was proud that its contestant in the Maha Sabha Diwali Contest, Cde. Farida McDougal had placed third.

The Section also organised the Corporation's participation in National Fairs, Festivals and Exhibitions.

CAPITAL

- (a) Fixed assets, inclusive of Work-in-Progress, increased by
 \$24.707 million. Actual cost at 1st January, 1976 of
 \$91.468 million rose to \$116.175 million by the end of
 1976. Accumulated depreciation was \$24.723 million, an
 increase of \$3.702 million over 1975 (\$21.021 million).
- (b) There was an increase in working capital of \$1.350 million, making a total of net current assets at 31.12.76 of \$9.290 million (\$7.940 million in 1975).
- (c) Equity in the Corporation which is held entirely by the Government of Guyana remained at \$9.901 million and General Reserves \$16.767 million (\$11.740 million in 1975)
- (d) Long and Medium term liabilities now stand at \$74.075 million (1975 \$56.746 million). A loan was obtained through Guyana State Corporation totalling \$4.174 million to supplement the present electrification programme.
- (e) Of the total capital of \$100.734 million employed in the Corporation, 9.83% is financed by the Government Stock, 16.64% by General Reserve and 73.53% by long and medium term loans.

formed part of the management development capability for the continuous development of supervisory staff at all levels.

Industrial Relations

New Collective Agreements were signed during the year for Senior Staff, General Monthly, and Hourly and Daily-paid employees. The three Agreements will expire on December 31, 1977.

First Aid Section

During the year, 1,696 cases were treated by the Industrial Nurses, also 135 employees were referred to hospital. There were two deaths as a result of Industrial accidents.

First Aid lectures were given to employees including those stationed at outposts and rural power stations.

Visits were paid to hospitalised employees as well as to pensioners.

Absenteeism

A total of 120,064 $\frac{1}{2}$ man-hours was lost through sickness and unauthorised absence.

Discussions towards the establishment of a medical scheme were in progress.

Electra Credit Union

Membership of the Electra Credit Union stood at 343. During the year loans amounted to \$141,911.55 and savings to \$146,255.02.

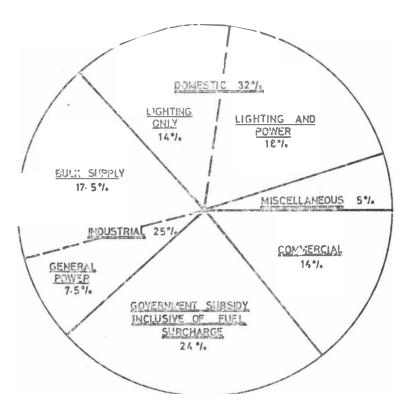

REVENUE AND EXPENDITURE

- (a) Kilowatt hours sales showed an increase of 6.35%, rising from 165.290 million units to 175.790 million units.
 Revenue received from sales under all tariffs aggregated \$37.302 million for the year (1975 \$31.790 million) an increase of 17.34% due entirely to a Government subsidy of \$9.031 million provided in lieu of a rate increase.
 The upward trend in sales (KWH) could be attributed to the fact that the Government of Guyana provided a subsidy to all consumers totalling \$9.031 million in 1976 instead of allowing tariff increases which would have been necessary because of rising costs.
- (b) Operating expenses including depreciation charges, but before interest, rose from \$25.787 million to \$32.315 million in 1976, an increase of \$6.528 million or 25.32%. Fuel cost was \$17.624 million and that represented 54.54% of total operating expenses. The actual cost of fuel was 18.63% or \$2.768 million more than 1974 (\$14.856 million in 1974)

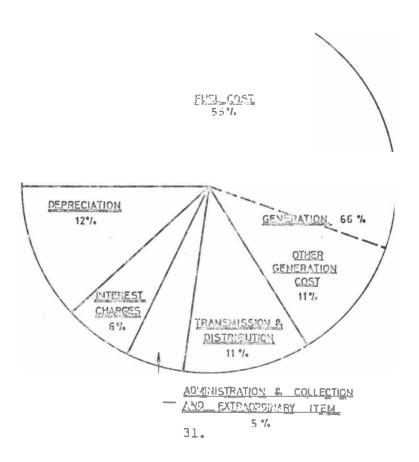

(c) Interest charges at \$2,216 million are above the 1975 figure of \$1.703 million by .513 million or 30.12%.

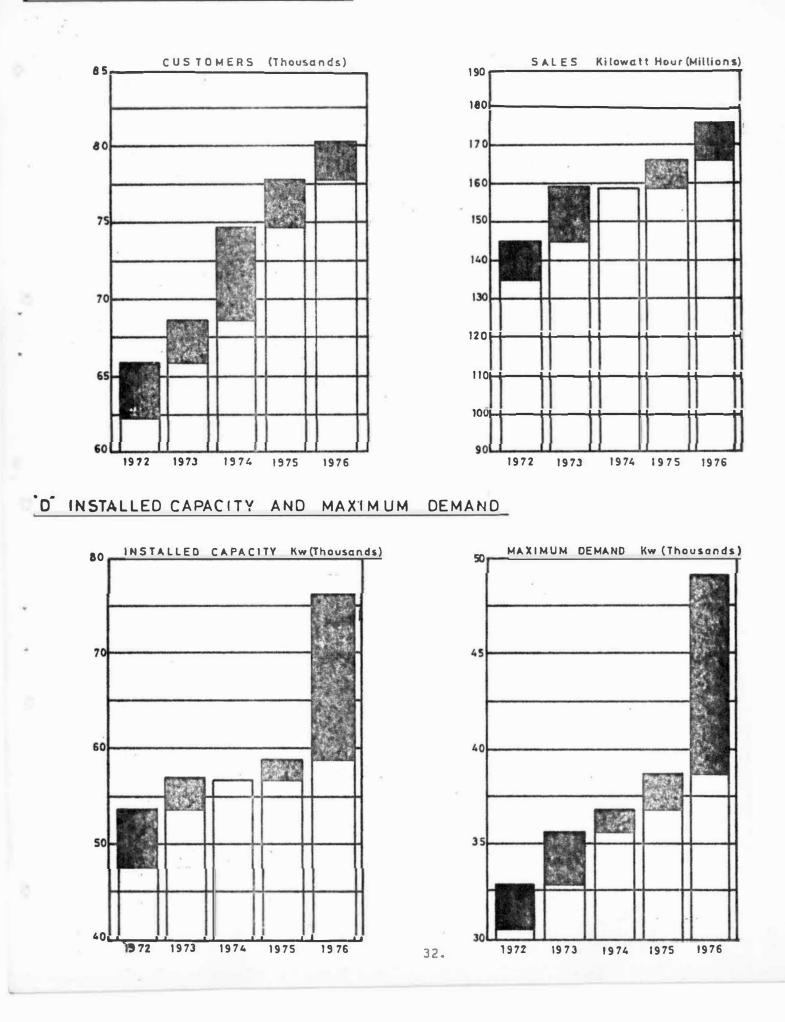

- (d) Operating surplus after all charges including depreciation, interest, taxation and extraordinary items amounted to \$5.027 million as compared with \$2.321 million in the previous years.
- (e) The rate of return on investment for 1976 is 12.90%.

The following diagrams illustrate pictorially a breakdown of the Corporation's Revenue (A), Expenditure (B), Customers and Unit Sales (C) and Installed Capacity and Maximum Demand (D) for the last five years.

REPORT OF THE AUDITORS ON THE ACCOUNTS AT 31ST DECEMBER, 1976

We have examined the annexed accounts which are in agreement with the books of the Corporation and have obtained all the information and explanations which we have required.

In our opinion these accounts which have been prepared on the historical cost basis, give on this basis, a true and correct view of the state of affairs of the Corporation at 31st December, 1976 and of the results of its operations and the source and application of its funds for the year then ended.

The accounts for the year ended 31st December, 1975 were audited by another firm of accountants.

THOMAS, STOLL, DIAS & CO. Accountants Auditors.

NOTES TO THE ACCOUNTS FOR THE YEAR ENDED 31ST DECEMBER, 1976

1. Accounting policies

Depreciation

Depreciation of fixed assets is on a straight line basis calculated on cost at the rates specified below which are estimated to write off the assets over the term of their useful lives viz:

Industrial buildings	-	3%
Generation Plant		5%
Transmission end distribution		7.5%
Motor vehicles		17.5%
Office equipment		8%
Miscellaneous equipment		5%

Depreciation is not provided on freehold lend and construction work-in-program.

Inventories

Invantaries are valued as follows:

(a) Stores and other miscellassous supplies and the lower of cost and net seelisable velue.

(b) Fuel

🗝 at cost,

The bases of valuation and methods of computing cost and net realisable value are consistent with those of the proceeding years

Deferred taxation

Provision is not made for taxation deferred by capitel allowances in excess of depreciation

Trenslation of foreign currency transactions

Foreign currency transactions are currently translated to Guyana dollars at the rates of exchange ruling at the dates of such transactions.

At each balance sheet dete, all amounts denomineted in foreign currencies are transleted to Guyana dollars at the exchange rates ruling on that date. See note 11,

NOTES TO THE ACCOUNTS FOR THE

YEAR ENDED 31ST DECEMBER, 1976

Interest charges

Charges on loans obtained to finance capital projects are capitalised as part of the cost of the projects while they are in course of construction.

General

These accounts have been prepared on an historical cost basis. No attempt has been made to adopt 'replacement cost accounting' or 'current cost accounting' procedures which would overcome the distorting effects of inflation.

2. The Corporation may at any time give notice to the Minister of Finance of its intention to redeem all or any part (having a nominal value of not less than \$100,000) of the redeemable stock for the time being issued and outstanding. Such notice shall be in writing an shall specify the amount of the redeemable stock to be redeemed and the date (not being less than thirty days after the delivery of the notice to the Minister) for the redeemption.

No redeemable stock shell be redeemed except out of profits of the Corporation or out of the proceeds of a new issue of stock or debentures or debenture stock made by the Corporation.

- 3. The loan is for £400,000. It is secured by a debenture giving a first floating charge on all the Corporation's assets and is repayable by ten annual instalments of £40,000 each, the first of which was paid in December, 1973. The fifth instalment of £40,000 (\$176,020) is included in current liabilities.
- 4. (a) The Government of Guyana has agreed that all income, corporation and property taxes for the years 1970 to 1975 less \$2,000,000 be converted into loans bearing interest at the rate of 8% per annum. (Note 4 (b) below). This \$2,000,000 was paid in 1974.

NOTES TO THE ACCOUNTS FOR THE

YEAR ENDED 31ST DECEMBER, 1976

- (c) The Government of Guyana additional loan of \$2,000,000 in 1976 was obtained to supplement the expansion programme. The loan bears interest at the rate of 8% per annum.
- (d) The property tax amounting to \$103,658 is reflected in current liabilities.
- 5. (a) The Guyana State Corporation's loan of \$4,077,440 in 1976 was obtained to supplement the expansion programme. The loan bears interest at the rate of 8 3/16% per annum. There is a two-year period of moratorium commencing September 17, 1976. Thereafter, the loan is repayable in three annual instalments. (Note 5 (b) below).
 - (b) The interest accrued on this loan at 31st December, 1976 amounted to \$96,951.
- 6. (a) During 1973 and 1974 the Covernment of Guyana entered into agreement with:
 - (i) The Canadian International Development Agency, and
 - (ii) The Overseas Development Ministry of United Kindgom to borrow C\$5,150,000 and £4,250,000 respectively for the specific purpose of on-lending to the Corporation. These loans bear interest at the rate of 6,2% per annum and are repayable to the Government of Guyana within a term of:
 - (i) 50 years with a grace period of ten years, and
 - (ii) 25 years with a grace period of four years respectively.

At 31st December, 1975, C\$5,042,903 was drawn down against the C.I.D.A. Loan and £3,371,397 was drawn down against the O.D.M. Loan.

APPENDIX V CONT'D

NOTES TO THE ACCOUNTS FOR THE

YEAR ENDED 31ST DECEMBER, 1976

- 7. This debenture was issued in 1973 for the sum of US\$6,000,000 for a term of 20 years including a four year grace period. It is secured by a floating charge on all the Corporation's assets and ranks pari passu with the other debentures issued by the Corporation. (Note 3). At 31st December, US\$5,778,541 was drawn down and the balance is to be drawn down on or before 30th June, 1977. The Government of Guyana has guaranteed this debenture.
- 8. Barclays Bank International Limited \$11,200,000.

Loan No. 2 for \$5.0 million.

2.0 million of this loan was drawn in 1973 and the balance of 3.0 million was drawn in 1974.

Loan No.3 for \$6.2 million.

This loan was agreed and drawn down in 1974.

The above loans are guaranteed by the Government of Guyana. Repayment terms of loans Nos. 2 and 3 include a four-year period of moratorium commencing from 1974. Thereafter, repayments will be \$1,000,000 per annum until the loans are repaid.
